OBIETTIVI CORSO

- Approfondire la metodologia CLIL per giovani studenti
- Creare lezioni utilizzando la metodologia CLIL
- Approfondire argomenti sulla sostenibilità

LESSON OUTLINE

01

Comunicazione e sostenibilità

02

Text CLIL input

03

Multimedia CLIL input

04

Writing CLIL input

05

Speaking CLIL input

GIORNO 1

TOPIC: WATER

GIORNO 2

STORYTELLING

GIORNO 3

MULTIMEDIA

GIORNO 4

WRITING

GIORNO 5

SPEAKING

CREARE UNA LEZIONE

Uno degli obiettivi del corso era anche quello di creare lezioni utilizzando la metodologia CLIL.
Divise quindi a coppie, abbiamo programmato delle lezioni che avevano come tema generale uno degli obiettivi dell'Agenda 2030.
Ogni coppia ha quindi prodotto un'unità didattica che aveva al centro la tematica della sostenibilità.

WHAT IS SUSTAINABILITY?

Sustainability is an environmental, social, and economical goal that aims to conserve resources and maintain a certain standard of living for people now and people of future generations.

To continue to thrive we must educate ourselves about our natural resource consumption and its effects on our environment, community, and economy.

For this presentation, we will focus on the environmental pillar of sustainability.

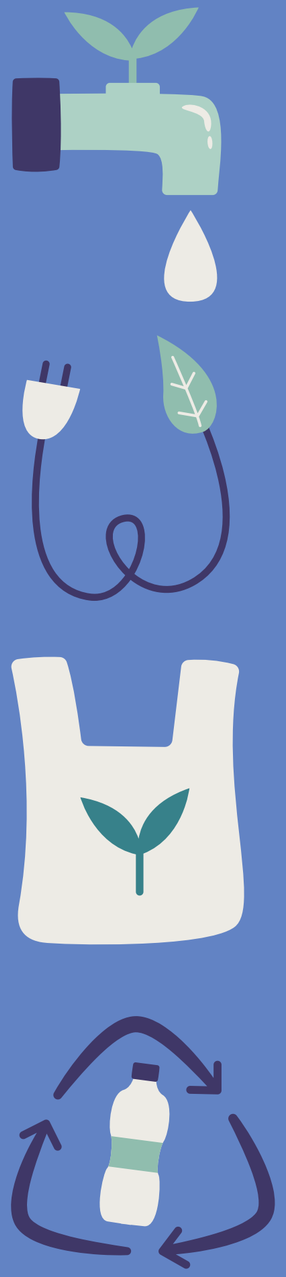

ENVIRONMENTAL IMPACT

Many of us are aware of the degradation of our environment due to water and air pollution from greenhouse emissions, waste, and plastics. There is also loss of biodiversity due to climate change and deforestation. These changes reduce an ecosystem's resiliency in protecting the life it supports.

The concept that is more complex to understand is the impact environmental stress has on our communities and industries. Natural resource depletion leads to disrupted supply chains and higher prices of products and services. Vulnerable communities are more impacted by these problems because they often lack access to essential resources, such as clean water.

Environmental sustainability also means social and economic sustainability. They are all connected to, and supported by, each other.

SUSTAINABILITY AND YOU

As individuals, we can adopt sustainable behaviors such as:

- Supporting businesses that sell eco-friendly products
- Recycling, reusing, and repurposing items
- Trying not to purchase single-use products
- Avoiding “fast fashion”
- Eating a sustainable diet
- Walking, biking, and using public transportation
- Volunteering with an organization to help pick up litter
- Conserving water and electricity at home

GROUP PROJECT

Design a sustainable community.

In your groups, research elements of a sustainable community. Decide what aspects would be important to you and explain why. Consider building materials and design. What resources would you have access to (food, education, healthcare)? How would people get to different destinations? What public spaces would you offer? Also consider energy, waste, and water management.

Create a slideshow that your group will present to the class.
